

# Claims

- [c1] 1. A flexible container for liquids, comprising a pliable, non-rigid outer shell; a pliable, non-rigid inner liner; a non-rigid intermediate structure, the intermediate structure being coupled to the outer shell to form a cross-sectional profile, the intermediate structure having an enclosed volume; and the inner liner having an enclosed volumetric capacity and a feed opening.
- [c2] 2. The flexible container of claim 1 wherein the intermediate structure is a tube open at both ends.
- [c3] 3. The flexible container of claim 1 wherein side surfaces of the outer shell are generally formed as a quadrilateral and the intermediate structure is coupled to the outer shell proximate the centers of each of the side surfaces of the outer shell.
- [c4] 4. The flexible container of claim 1 wherein the inner liner has at least one outlet.
- [c5] 5. The flexible container of claim 4 wherein the at least one outlet is a tube extending outwardly from the top surface of the inner liner.

[c6] 6. The flexible container of claim 5 wherein the end of the tube is reversibly sealable with straps.
